

Environmental effects associated with snow grooming and skiing at Treble Cone Ski Field

Barry Fahey, Kate Wardle, and Peter Weir

SCIENCE FOR CONSERVATION 120

Published by
Department of Conservation
P.O. Box 10-420
Wellington, New Zealand

Science for Conservation presents the results of investigations by DOC staff, and by contracted science providers outside the Department of Conservation. Publications in this series are internally and externally peer reviewed.

Keywords: snow grooming, skiing, environmental effects, vegetation change, alpine vegetation, soil disturbance, snow properties, Treble Cone Ski Field, Lakes Ecological Region.

© October 1999, Department of Conservation

ISSN 1173-2946

ISBN 0-478-21846-X

This publication originated from work done under Department of Conservation Investigation no. 2104, carried out by Barry Fahey and Kate Wardle, Landcare Research, PO Box 69, Lincoln, and Peter Weir, Silvatech Consulting Ltd, PO Box 1030, Salmon Arm, BC, Canada. It was approved for publication by the Manager, Science & Research Unit, Science Technology and Information Services, Department of Conservation, Wellington.

Cataloguing-in-Publication data

Fahey, Barry

Environmental effects associated with snow grooming and skiing at Treble Cone Ski Field / Barry Fahey, Kate Wardle, and Peter Weir. Wellington, N.Z. : Dept. of Conservation, 1999.

1 v. ; 30 cm. (Science for conservation, 1173-2946 ; 120)

Includes bibliographical references.

Contents: Part 1, Vegetation and soil disturbance. - Part 2, Snow properties on groomed and non-groomed slopes.

ISBN 047821846X

1. Ski resorts—New Zealand—Environmental aspects.
 2. Mountain ecology—New Zealand—Effect of snow grooming on.
 3. Mountain plants—New Zealand—Effect of snow grooming on.
- I. Wardle, Kate. II. Weir, Peter. III. Title. Series: Science for conservation (Wellington, N.Z.) ; 120.

CONTENTS

PART 1. VEGETATION AND SOIL DISTURBANCE

Kate Wardle and Barry Fahey

Abstract	1
1. Introduction	2
1.1 Objectives	3
2. Cushionfield vegetation	3
3. Constraints on site selection	4
4. Methods	5
4.1 Vegetation sampling procedures	5
4.2 Soil sampling procedures	7
4.3 Observations and site information	7
5. Data analysis	7
5.1 Vegetation analyses	7
5.2 Soil analyses	10
6. Results	11
6.1 Ground cover	11
6.2 Species frequency	12
6.3 Species richness	12
6.4 Observations	12
6.5 Soil bulk density	14
6.6 Soil penetration resistance	14
7. Discussion	15
7.1 Direct damage to vegetation	15
7.2 Indirect effects on vegetation	16
8. Conclusions	18
9. Recommendations	18
10. Acknowledgements	19
11. References	20

12.	Appendices	22
12.1	Transect information	22
12.2	Percentage species frequency data	31
12.3	Percentage ground cover data	34
12.4	Photographic record (taken January 1997)	35
12.5	Visitor numbers and snow grooming patterns at Treble Cone	45

PART 2. SNOW PROPERTIES ON GROOMED AND NON-GROOMED SLOPES

Barry Fahey, Kate Wardle, and Peter Weir

	Abstract	49
1.	Introduction	50
1.1.	Objectives	51
2.	Methods	52
2.1	Snow depth	52
2.2	Snow density and equivalent water content	52
2.3	Relative hardness of snow layers	54
2.4	Statistical tests	54
2.5	Background information	54
2.6	Conditions during visits	55
3.	Results	56
3.1	Snow depth	56
3.2	Snow densities	56
3.3	Equivalent water contents	57
3.4	Snow penetration resistance (hardness)	58
4.	Discussion	59
5.	Conclusions	60
6.	Recommendations	60
7.	Acknowledgements	61
8.	References	61
